

TT8200-N: Secure .Net Coding (3 days)

According to research by the National Institute of Standards, 92% of all security vulnerabilities are now considered application vulnerabilities and not network vulnerabilities

Trivera Technologies' *Best Defense™ Security Training Series* is a suite of developer-oriented, application security courses that provide complete coverage of the recently released CWE/SANS *Top 25 Most Dangerous Programming Errors* (<http://cwe.mitre.org/top25/>). These errors, as determined by a consortium of cyber security organizations, enable cyber espionage and crime. Our comprehensive application security and secure coding classes address each of these critical issues head-on, as our courses, seminars and workshops explicitly:

- Teach programmers what these errors are
- Demonstrate, in real terms, the potential impact of each of these errors
- Provide experience in how to recognize and properly address these errors
- Teach stakeholders how to defend against the potential consequences of security breaches in other parts of their IT infrastructure.

COURSE SNAPSHOT

Course: TT8200-N: Secure .Net Coding

Duration: 3 days

Skill Level: Intermediate

Focus: Hands-on programming class, covering why and how to build security into .Net applications

Audience: .Net Developers

Format: Extensive programming labs; Expert lecture combined with open discussions and high-level demonstrations. This is a hands-on programming course - student machines are required.

Language / Tools: Labs are done using .Net and C#. The preferred tools for the class are Visual Studio 2008, IIS, SQL Server, and C#. This course has a .Net focus, although it may also be presented for Java (TT8200-J) or other programming languages, or for a language neutral / agnostic focus (TT8200).

Delivery Format: Available for onsite private classroom presentation, or live online / virtual presentation

Customizable: Yes

Secure .Net Coding is a hands-on, lab-intensive .Net security, code-level training course that teaches students the best practices for designing, implementing, and deploying secure programs in .Net. Students will take an application from requirements through to implementation, analyzing and testing for software vulnerabilities. This course explores well beyond basic programming skills, teaching developers sound processes and practices to apply to the entire software development lifecycle. Perhaps just as significantly, students learn about current, real examples that illustrate the potential consequences of not following these best practices. This course is short on theory and long on application, providing students with in-depth, code-level labs.

A key component to our *Best Defense IT Security Training Series*, this workshop is a companion course with several developer-oriented courses and seminars. Although this edition of the course is .Net-specific, it may also be presented using Java or other programming languages.

► Course Objectives: What You'll Learn

Students who attend *Secure .Net Coding* will leave the course armed with the required skills to recognize software vulnerabilities (actual and potential) and implement defenses for those vulnerabilities. This course quickly introduces developers to the various types of threats against their software.

The concept and process of Threat Modeling is introduced as a key enabler for implementing effective and appropriate security for software and information assets. This course includes

coverage of the many security-related technologies and APIs that exist in the .Net world.

Working in an hands-on, dynamic learning environment, let my our expert security team, attendees will learn to:

- Understand the concepts and terminology behind defensive coding
- Understand and use Threat Modeling as a tool in identifying software vulnerabilities based on realistic threats against meaningful assets
- Learn the entire spectrum of threats and attacks that take place against software applications in today's world

- Use Threat Modeling to identify potential vulnerabilities in a real life case study
- Perform both static code reviews and dynamic application testing to uncover vulnerabilities in .Net applications
- Understand the vulnerabilities of the .Net programming language and the runtime environment as well as how to harden both
- Understand and work with .Net platform security to gain an appreciation for what is protected and how
- Understand the basics of .Net Cryptography and Encryption and where they fit in the overall security picture
- Understand the fundamentals of XML Digital Signature and XML Encryption

This class is “technology-centric”, designed to train attendees in essential secure coding and development skills, coupling the most current, effective techniques with the soundest industry practices. This workshop is about **50% dynamic lab exercises** and **50% lecture**

The course provides a solid foundation in basic terminology and concepts, extended and built upon throughout the engagement. Students will examine various recognized attacks against web applications. Processes and best practices are discussed and illustrated through both discussions and group activities.

The second portion of the course steps through a series of vulnerabilities illustrating in very real terms the right way to implement secure .Net applications. The last portion of the course examines several design patterns that can be used to facilitate better application architecture, design, implementation, and deployment.

► Audience & Pre-requisites: Who Should Attend

This is an **intermediate-level** .Net programming course designed for application project stakeholders who wish to get up and running on developing well defended .Net applications. Familiarity with the C# programming language is required, and real world programming experience is highly recommended.

► Related Courses – Suggested Learning Path

Take Before: Students should have an understanding and a working knowledge in basic programming in .Net. Students should have experience similar to:

- **TTO412 .Net Framework Using C#**

Take Instead: We offer other courses that provide different levels of knowledge or focus:

- For a higher level (non-coding, language agnostic) view of security and related issues consider **TT8000 Understanding Application Security (Seminar)** or the more indepth-**TT8100 Secure Application Development (Seminar)**
- For complete study of the full application lifecycle consider **TT8205-N Secure .Net Coding – Lifecycle** (an extension of this course)
- For in-depth developer training for web applications,

consider: **TT8320-N Securing .Net Web Applications**

Take After: We offer a variety of introductory through advanced security, development, project management, engineering, architecture and design courses. Students may want to consider the following topics as follow-on to this course.

- **TT8500-N Securing .Net Web Services**
- **TT8150 Mastering Secure SOA**
- **TT8600 Secure Software Design**
- Additional advanced Security or Secure Programming topics
- Service-Oriented Analysis and Design
- Web Services – Intro through Advanced
- Software Engineering, Design or Project Management tracks

Please note all development courses may also be offered in other programming languages or tailored to suit your unique requirements. Please contact us for details. Please contact us for recommended next steps tailored to your longer term education, project or development objectives.

► Delivery Environment: Tools to Use

Although this training is skills-centric, this course can be delivered using a variety of software versions. The preferred tools for the class are Visual Studio 2008, IIS, SQL Server, and C#.

Our detailed workbooks are complete with software-specific screen shots and step-by-step tutorials for using the software you select. In most cases we can easily port our classes to run in the environment of your choosing.

► Easy & Secure Set Up! LoadNGo™ Instant Classroom Kit

For course deliveries or virtual presentation using open-source tools, we'll provide our unique **LoadNGo Instant Classroom Kit**, which enables students to run the entire course off of a DVD that hosts the entire course set up software, labs, and other pertinent useful educational resources, whitepapers and more. You only need to provide the hardware and appropriate O/S, and we'll do the rest. No installation needed. **Great for secure environments.** Minimum set up burden for your team or firm, with maximum results for your students.

No matter which set up option or software your firm requires, we're pleased to provide a detailed set up guide for all private or on-site courses, and as much assistance as you require to prepare your students or classroom for the course. Our support personnel and instructors can be contacted for any advice you may require to prepare your classroom and/or students for attendance.

► Student Materials: What You'll Receive

Our robust course materials include much more than a simple slideshow presentation handout. Student materials include a comprehensive hard-copy course manual, complete with detailed course notes, code samples, diagrams and current

reference materials, all directly related to the course at hand, indexed for ease of use. Step-by-step lab instructions and project descriptions are clearly illustrated and commented for maximum learning.

In addition to everything students need for the course, the **LoadNGo Instant Classroom Kit** described above also includes of workshop labs and solutions; non-restricted workshop software, APIs, documentation, technical education papers, and specifications and tutorials pertinent to the training course. Our course kits are designed to serve as an excellent and useful reference set, long after we leave your classroom.

► **Optional Pre / Post-Testing & Skills Assessment**

We work with you to ensure that your resources are well spent. Through our basic course pre-testing and/or post-course assessments, we ensure your team is up to the challenges that this course offers. Our goal is to structure the best solution to ensure your needs are met, whether we customize the material, or devise a different educational path to prepare for this course.

Please contact us for details about our online pre and post test

assessment services, custom managed training plans for one student or your entire organization, or our custom online training program management system for monitoring the courses or progress while skilling your students of all experience levels.

► **Bridging the Gap: Collaborative Mentoring Services**

Our team of technical experts is also available for various project assistance services to help your team apply their newly-learned classroom skills to their real-world project in a meaningful, practical way, right after the training ends.

Our custom **collaborative mentoring programs** integrate with or extend your team's classroom training experience, to help bring these skills into existing (or inherited) legacy projects, into new projects, or to simply keep your students sharp them in between projects. Our programs can be highly involved and closely integrated with your project timelines or group development efforts, or can be less involved, serving simply as an overarching educational framework or 'spot check' to keep your group skills moving forward in between projects or waiting for projects to begin. Please contact us for details about this exciting custom service.

Workshop Topics Covered

Session: Defensive Coding Overview

- Misconceptions
 - Thriving Industry of Identify Theft
 - Dishonor Roll of Data Breaches
 - TJX: Anatomy of a Disaster
 - Heartland: What? Again?
- Security Concepts
 - Terminology and Players
 - Assets, Threats, and Attacks
 - OWASP
 - CWE/SANS Top 25 Programming Errors
 - Categories
 - What they mean to your applications
- Defensive Coding Principles
 - Security Is A Lifecycle Issue
 - Minimize Attack Surface
 - Manage Resources
 - Application States
 - Compartmentalize
 - Defense In Depth - Layered Defense
 - Consider All Application States
 - Not Trusting The Untrusted
 - Security Defect Mitigation
 - Leverage Experience
- Reality
 - Recent, Relevant Incidents
 - Find Security Defects In Web

Application

Session: Vulnerabilities

- Unvalidated Input – XSS/CSRF, Injection, and Others
- Broken Authentication and Authorization
- Information Leakage - Error Handling, Logging, Insecure Storage and Others
- Spoofing - Protecting Your Users and Your Applications

Session: .Net Security Fundamentals

- Perimeter Defenses
- .Net Security Architecture
- Runtime Defenses
- Extending the defenses

Session: Cryptography Overview

- Cryptography defined
- Strong Encryption
- Ciphers and algorithms
- Message digests
- Keys and key management
- Types of keys
- Key management in .Net
- Certificate management in .Net
- Encryption/Decryption

Session: User-based .Net Security

- Overview

- Authentication
- Extending authentication
- Authorization

Session: Network Security

- SSL Support
- HTTPS
- GSS
- SASL protocols

Session: Code Level Security Best Practices

- What .Net security provides for
- Preventing remote hacking
- Preventing accessing of restricted resources
- Retaining credibility with .Net code

Session: Enterprise Security

- .Net security in enterprise context
- Role-based authentication
- Pattern-based authentication

Session: Defending XML Processing

- Defending XML
 - Understanding common attacks and how to defend
 - Operating in safe mode
 - Using standards-based security
 - XML-aware security infrastructure

Need more info? Please note that a more detailed outline of the course table of contents, lists of lab exercises and project descriptions is available. Please contact

us at Training@triveratech.com for info.

Need courseware? This course is fully customizable, and also available for

license with complete support for qualified organizations. Please contact Courseware@triveratech.com for details.

► Why Work With Trivera Technologies?

Whether you are a project leader choosing a training provider or course to bring to your team, or an organization or an instructor looking to potentially license or use course materials to train your own team, or a student looking for an exciting, targeted training class to attend or to recommend to your colleagues - **Our single focus is to make YOUR training event or experience a success.** Here's why choosing Trivera Technologies as your application security education resource takes the risk right out of your decision making process...

- **We provide a solid secure, design, coding and implementation foundation.** Students will learn how to code, use (and reuse!) essential secure Java programming and design skills and concepts properly, using best coding practices, grounding them for advanced curriculum, and will be prepared for designing and implementing solutions. **Students will learn the importance of developing well-defended applications.**
- **Our courses are focused - no "fluff" included.** We offer more than a "laundry list" approach to teaching. All lessons have clear objectives, are fundamental to core secure application development and design practices, and are reinforced by hands-on labs and solid practical examples. Each lesson has performance driven objectives that ensure students will learn technologies and skills core to fundamental server-side application design – nothing more, nothing less.
- **Our materials are comprehensive, and current.** Our comprehensive manuals include not only a hard copy of the course presentation, but also detailed reference notes, pertinent diagrams and charts, current lists of suggested online resources and articles, and often technical tutorials or white papers geared to the topics at hand. Our dedicated course development team keeps everything as current as possible with both industry trends and software editions to ensure your team is getting the most current information available.
- **We foster "Learning by Doing".** Progressive labs are designed in such a way that students get a firm grasp on fundamental skills while they work toward designing a complete application. All labs are take-home, and all solution code is presented in an easy to use self-study format for future use and review.
- **We set you up!** Hands-on courses also include our unique materials for each student, complete with our **LoadNGo Instant Classroom** course set up DVD, software, and a multitude of learning resources that complement the course. Run the course right off the DVD – minimal set up for your company – maximum results for your students.
- **We have to adhere to higher standards.** As a courseware provider to other organizations, training firms and/or independent instructors, our content and hands-on lab materials are licensed internationally by dozens of firms, and are therefore subject to very stringent quality requirements. Not only will your organization benefit from our own technical team's technical expertise, but also benefit from the feedback of hundreds of students and trainers using these materials, worldwide, on a regular basis. This unique fact guarantees that our materials are not only robust and interesting, but also technically correct, current and of the highest quality and usability.
- **We bring years of practical, current experience into the classroom and content.** Our instructors and course authors are also skilled mentors, Java, JEE/JavaEE, J2EE, .Net, Agile, SOA, and web services developers, architects and security-oriented professionals. We believe that learning, using and maintaining solid software execution and delivery methods are as important as gaining sharp coding skills. Best Practices for software development and execution, beyond technical coding skills, are enforced throughout all of our courses and discussions. Our team brings this extensive experience into every classroom and engagement. Our team has trained thousands of students.
- **We're skills-centric.** Although our team has extensive experience using a variety of tools and solutions, our core content is "technology-centric". Our aim is to teach you the best skills and solutions out there – not to sell you software from any particular vendor.
- **We're published technical authors, online contributors and industry speakers.** Our team was selected to write the online *J2EE, EJB, EJB CMP-CMR and Web Services Tutorial Series for IBM developerWorks®* (www.ibm.com) These are the same instructors who train our classes and author the courseware. Most of our trainers/consultants have also authored additional articles on web services, EJB, Struts, J2EE / JEE and advanced Java topics, and are recognized speakers and presenters on the industry technical seminar circuit. Our team is comprised on several successful published authors. Members of our team have written or contributed to: *Eclipse Kick Start, Mastering Eclipse; Professional Jakarta Struts; Using Java Tools for Extreme Programming; Mastering Resin; Mastering TomCat and others.*
- **Our services are guaranteed.** Whether you're a stakeholder organizing your firm's educational services, a student in our live or virtual classroom or a trainer using our materials to educate your own client or team – **Our core mission is to make YOU a success in the classroom.**

► **For Additional Information**

Need dedicated training? All courses can be brought onsite or run virtually for a **private presentation, anywhere around the world**, customized to suit your unique requirements or goals.

Please contact Training@triveratech.com for course details, Public Schedule dates and locations, and Special Discount Offers.

Need courseware? **Let us take the risk out of your classroom delivery!** All materials are also available on a worldwide basis for corporate license with complete instructor support and free corporate branding. Our LoadNGo Set up is available to partners as well! We guarantee our pricing and service. Samples of our course materials, as well as live client references for all of our services are available upon request. Please contact Courseware@triveratech.com for details.

For more information about our training, mentoring or courseware development or licensing options, or to see our complete list of course offerings and services, please visit us at www.triveratech.com, email Training@triveratech.com or call 609.953.1515.
