

TT8500-N: Securing .Net Web Services (4 days)

According to research by the National Institute of Standards, 92% of all security vulnerabilities are now considered application vulnerabilities and not network vulnerabilities

Trivera Technologies' *Best Defense™ Security Training Series* is a suite of developer-oriented, application security courses that provide complete coverage of the recently released CWE/SANS *Top 25 Most Dangerous Programming Errors* (<http://cwe.mitre.org/top25/>). These errors, as determined by a consortium of cyber security organizations, enable cyber espionage and crime. Our comprehensive application security and secure coding classes address each of these critical issues head-on, as our courses, seminars and workshops explicitly:

- Teach programmers what these errors are
- Demonstrate, in real terms, the potential impact of each of these errors
- Provide experience in how to recognize and properly address these errors
- Teach stakeholders how to defend against the potential consequences of security breaches in other parts of their IT infrastructure.

COURSE SNAPSHOT

Course: TT8500-N: Securing .Net Web Services

Duration: 4 days

Skill Level: Intermediate and beyond

Focus: Hands-on programming and analysis class covering why and how to integrate security into the entire software development lifecycle for .Net web services (also offered for .J2EE or JEE)

Audience: .Net Web Developers

Format: Extensive hands-on programming labs; Expert lecture combined with open discussions and high-level demonstrations. This is a programming course - student machines are required.

Language / Tools: Labs are done using .Net and C#. The preferred tools for the class are Visual Studio 2008, IIS, SQL Server, and C#.

Delivery Format: Available for onsite private classroom presentation, or live online / virtual presentation

Customizable: Yes

Securing .Net Web Services is a lab-intensive, hands-on .Net security training course, essential for experienced enterprise developers who need to produce secure .Net-based web services. In addition to teaching basic programming skills, this course digs deep into sound processes and practices that apply to the entire software development lifecycle.

Designing, implementing, and deploying secure services presents unique challenges. In addition to dealing with all of the vulnerabilities and attacks associated with web applications, web services must address business-oriented concerns such as authentication, authorization, non-repudiation and others. The complicating factor is that all measures must be implemented within the constraints of standards and high-level s of inter-operability.

In this course, students thoroughly examine best practices for defensively coding .Net services, including XML processing. Students will repeatedly attack and then defend various assets associated with fully-functional web services. This hands-on approach drives home the mechanics of how to secure .Net web services in the most practical of terms.

Security experts agree that the least effective approach to security is "penetrate and patch". It is far more effective to "bake" security into an application throughout its lifecycle. After spending significant time trying to defend a poorly designed (from a security perspective) web application, developers are ready to learn how to build secure web applications starting at project inception. The final portion of this course builds on the previously learned mechanics for building defenses by exploring how design and analysis can be used to build stronger applications from the beginning of the software lifecycle.

A key component to our *Best Defense IT Security Training Series*, this workshop is a companion course with several developer-oriented courses and seminars. Although this edition of the course is .Net-specific, it may also be presented using Java or other programming languages.

► **Course Objectives: What You'll Learn**

Students who attend **Securing .Net Web Services** will leave the course armed with the skills required to recognize actual and potential software vulnerabilities, implement defenses for those vulnerabilities, and test those defenses for sufficiency.

This course quickly introduces developers to the most common security vulnerabilities faced by web applications today. Each vulnerability is examined from a .Net perspective through a process of describing the threat and attack mechanisms, recognizing associated vulnerabilities, and, finally, designing, implementing, and testing effective defenses. Multiple practical labs reinforce these concepts with real vulnerabilities and attacks. Students are then challenged to design and implement the layered defenses they will need in defending their own applications.

Working in a lab-intensive, hands-on programming environment, led by our security experts, guided by our expert security team, students will learn to:

- Understand potential sources for untrusted data
- Understand the consequences for not properly handling untrusted data such as denial of service, cross-site scripting, and injections
- Be able to test web applications with various attack techniques to determine the existence of and effectiveness of layered defenses
- Prevent and defend the many potential vulnerabilities associated with untrusted data
- Understand the vulnerabilities of associated with authentication and authorization
- Be able to detect, attack, and implement defenses for authentication and authorization functionality and services
- Understand the dangers and mechanisms behind Cross-Site Scripting (XSS) and Injection attacks
- Be able to detect, attack, and implement defenses against XSS and Injection attacks
- Understand the concepts and terminology behind defensive, secure, coding
- Understand the use of Threat Modeling as a tool in identifying software vulnerabilities based on realistic threats against meaningful assets
- Perform both static code reviews and dynamic application testing to uncover vulnerabilities in .Net-based web applications
- Understand the basics of XML Encryption as well as how it can be used as part of the defensive infrastructure for web services
- Understand the basics of XML Digital Signature as well as how it can be used as part of the defensive infrastructure for web services
- Understand and defend vulnerabilities that are specific to XML and XML parsers

This class is “technology-centric”, designed to train attendees in essential secure coding and development skills, coupling the

most current, effective techniques with the soundest industry practices.

The course provides a solid foundation in basic terminology and concepts, extended and built upon throughout the engagement. Students will examine various recognized attacks against web applications. Processes and best practices are discussed and illustrated through both discussions and group activities.

The second portion of the course steps through a series of vulnerabilities illustrating in very real terms the right way to implement secure web services. The last portion of the course examines several design patterns that can be used to facilitate better application architecture, design, implementation, and deployment.

► **Audience & Pre-requisites: Who Should Attend**

This is an **intermediate-level** .Net programming course designed for application project stakeholders who wish to get up and running on developing well defended .Net applications. Familiarity with the C# programming language is required, and real world programming experience is highly recommended.

► **Related Courses – Suggested Learning Path**

Take Before: Students should have an understanding and a working knowledge in basic programming in .Net. Students should have experience similar to:

- **TTO412 .Net Framework Using C#**

Take Instead: We offer other courses that provide different levels of knowledge or focus:

- For a higher level view of web application security and related issues, consider **TT8020 Understanding Web Application Security**
- For a web application orientation not specific to .Net, consider: **TT8120 Secure Web Application Development Seminar (Language Neutral Edition)**
- For in-depth developer training for web applications without
- the lifecycle aspect, consider: **TT8320-N Securing .Net Web Applications**
- For in-depth developer training with less web application orientation, consider: **TT8200-N Secure .Net Coding**

Take After: We offer a variety of introductory through advanced security, development, project management, engineering, architecture and design courses. Students may want to consider the following topics as follow-on to this course.

- **TT8150 Mastering Secure SOA**
- **TT8600 Secure Software Design**
- Additional advanced Security or Secure Programming topics
- Service-Oriented Analysis and Design
- Web Services – Intro through Advanced
- Software Engineering, Design or Project Management tracks

Please note all development courses may also be offered in other programming languages or tailored to suit your unique requirements. Please contact us for details. Please contact us for recommended next steps tailored to your longer term education, project or development objectives.

► **Delivery Environment: Tools to Use**

Although this training is skills-centric, this course can be delivered using a variety of software versions. The preferred tools for the class are Visual Studio 2008, IIS, SQL Server, and C#.

Our detailed workbooks are complete with software-specific screen shots and step-by-step tutorials for using the software you select. In most cases we can easily port our classes to run in the environment of your choosing.

► **Easy & Secure Set Up! LoadNGo™ Instant Classroom Kit**

For course deliveries or virtual presentation using open-source tools, we'll provide our unique **LoadNGo Instant Classroom Kit**, which enables students to run the entire course off of a DVD that hosts the entire course set up software, labs, and other pertinent useful educational resources, whitepapers and more. You only need to provide the hardware and appropriate O/S, and we'll do the rest. No installation needed. **Great for secure environments.** Minimum set up burden for your team or firm, with maximum results for your students.

No matter which set up option or software your firm requires, we're pleased to provide a detailed set up guide for all private or on-site courses, and as much assistance as you require to prepare your students or classroom for the course. Our support personnel and instructors can be contacted for any advice you may require to prepare your classroom and/or students for attendance.

► **Student Materials: What You'll Receive**

Our robust course materials include much more than a simple slideshow presentation handout. Student materials include a comprehensive hard-copy course manual, complete with detailed course notes, code samples, diagrams and current reference materials, all directly related to the course at hand, indexed for ease of use. Step-by-step lab instructions and

project descriptions are clearly illustrated and commented for maximum learning.

In addition to everything students need for the course, the **LoadNGo Instant Classroom Kit** described above also includes of workshop labs and solutions; non-restricted workshop software, APIs, documentation, technical education papers, and specifications and tutorials pertinent to the training course. Our course kits are designed to serve as an excellent and useful reference set, long after we leave your classroom.

► **Optional Pre / Post-Testing & Skills Assessment**

We work with you to ensure that your resources are well spent. Through our basic course pre-testing and/or post-course assessments, we ensure your team is up to the challenges that this course offers. Our goal is to structure the best solution to ensure your needs are met, whether we customize the material, or devise a different educational path to prepare for this course.

Please contact us for details about our online pre and post test assessment services, custom managed training plans for one student or your entire organization, or our custom online training program management system for monitoring the courses or progress while skilling your students of all experience levels.

► **Bridging the Gap: Collaborative Mentoring Services**

Our team of technical experts is also available for various project assistance services to help your team apply their newly-learned classroom skills to their real-world project in a meaningful, practical way, right after the training ends.

Our custom **collaborative mentoring programs** integrate with or extend your team's classroom training experience, to help bring these skills into existing (or inherited) legacy projects, into new projects, or to simply keep your students sharp them in between projects. Our programs can be highly involved and closely integrated with your project timelines or group development efforts, or can be less involved, serving simply as an overarching educational framework or 'spot check' to keep your group skills moving forward in between projects or waiting for projects to begin. Please contact us for details about this exciting custom service.

Workshop Topics Covered

Session: Foundation

- Misconceptions
 - Thriving Industry of Identify Theft
 - Dishonor Roll of Data Breaches
 - TJX: Anatomy of a Disaster
 - Heartland: What? Again?
- Security Concepts
 - Terminology and Players

- Assets, Threats, and Attacks
- OWASP
- CWE/SANS Top 25 Programming Errors
 - Categories
 - What they mean to your services
- Defensive Coding Principles
- Reality
 - Recent, Relevant Incidents

- Find Security Defects In Web Application

Session: SOA Security Overview

- Challenges
 - Identity and Propagation
 - Real-time Transactions
 - Diverse Environments
 - Information Protection
 - Standards compliance

- Services and Security
 - SOA Components
 - Service Lifecycle
 - Security Policies
- Security Services
 - Identity
 - Authentication
 - Authorization
 - Confidentiality/Integrity
 - Auditing
 - Non-repudiation

Session: Applying Security to Services

- Direct Service Exposure
- Indirect Service Exposure
- Enterprise Service Bus (ESB)
 - Mediating Security Services
 - Transport-Level Security
 - Message-Level Security
 - Policy Enforcement
 - Policy Management
 - Protecting the ESB
- Composed Services
 - Single-Sign On
 - Trust Relationships
 - Trust Relationships and Web Services

Session: Defending XML Processing

- Defending XML
 - Understanding common attacks and how to defend
 - Operating in safe mode
 - Using standards-based security
 - XML-aware security infrastructure
- Defending Web Services
 - Security exposures
 - Transport-level security
 - Message-level security
 - WS-Security
 - Attacks and defenses

Session: WS-Security

- WS-Security
 - WS-Security Stack

- Best Practices
- XML Digital Signature
 - Architecture
 - Working with XML Digital Signature
 - Integrating XML Digital Signature into Web Services
 - Best Practices

Session: Top Security Vulnerabilities

- Unvalidated Input
- Overview of Regular Expressions
- Broken Access Control
- Broken Authentication and Session Management
- Cross Site Scripting (XSS/CSRF) Flaws
- Injection Flaws
- Error Handling and Information Leakage
- Insecure Storage
- Insecure Management of Configuration
- Direct Object Access
- Spoofing

Session: Best Practices

- Best Practices and Principles
 - Security Is A Lifecycle Issue
 - Minimize Attack Surface
 - Manage Resources
 - Application States
 - Compartmentalize
 - Defense In Depth - Layered Defense
 - Consider All Application States
 - Not Trusting The Untrusted
 - Security Defect Mitigation
 - Leverage Experience
- Web Application Security Design Patterns
 - Authentication Enforcer
 - Authorization Enforcer
 - Intercepting Validator
 - Secure Base Action
 - Secure Logger
 - Secure Pipe

- Secure Service Proxy
- Intercepting Web Agent

Session: Secure Software Development (SSD)

- SSD Process Overview
 - CLASP Defined
 - CLASP Applied
- Asset, Boundary, and Vulnerability Identification
- Vulnerability Response
- Design and Code Reviews
- Applying Processes and Practices
- Risk Analysis

Session: Security Testing

- Testing as Lifecycle Process
- Testing Planning and Documentation
- Testing Tools And Processes
 - Principles
 - Reviews
 - Testing
 - Tools
- Static and Dynamic Code Analysis
- Testing Practices
 - Authentication Testing
 - Session Management Testing
 - Data Validation Testing
 - Denial Of Service Testing
 - Web Services Testing

Need more info? Please note that a more detailed outline of the course table of contents, lists of lab exercises and project descriptions is available. Please contact us at Training@triveratech.com for info.

Need courseware? This course is fully customizable, and also available for license with complete support for qualified organizations. Please contact Courseware@triveratech.com for details.

► Why Work With Trivera Technologies?

Whether you are a project leader choosing a training provider or course to bring to your team, or an organization or an instructor looking to potentially license or use course materials to train your own team, or a student looking for an exciting, targeted training class to attend or to recommend to your colleagues - **Our single focus is to make YOUR training event or experience a success.** Here's why choosing Trivera Technologies as your application security education resource takes the risk right out of your decision making process...

- **We provide a solid secure, design, coding and implementation foundation.** Students will learn how to code, use (and reuse!) essential secure .Net programming and design skills and concepts properly, using best coding practices, grounding them for advanced

curriculum, and will be prepared for designing and implementing solutions. **Students will learn the importance of developing well-defended applications.**

- **Our courses are focused - no "fluff" included.** We offer more than a "laundry list" approach to teaching. All lessons have clear objectives, are fundamental to core secure application development and design practices, and are reinforced by hands-on labs and solid practical examples. Each lesson has performance driven objectives that ensure students will learn technologies and skills core to fundamental server-side application design – nothing more, nothing less.
- **Our materials are comprehensive, and current.** Our comprehensive manuals include not only a hard copy of the course presentation, but also detailed reference notes, pertinent diagrams and charts, current lists of suggested online resources and articles, and often technical tutorials or white papers geared to the topics at hand. Our dedicated course development team keeps everything as current as possible with both industry trends and software editions to ensure your team is getting the most current information available.
- **We foster "Learning by Doing".** Progressive labs are designed in such a way that students get a firm grasp on fundamental skills while they work toward designing a complete application. All labs are take-home, and all solution code is presented in an easy to use self-study format for future use and review.
- **We set you up!** Hands-on courses also include our unique materials for each student, complete with our **LoadNGo Instant Classroom** course set up DVD, software, and a multitude of learning resources that complement the course. Run the course right off the DVD – minimal set up for your company – maximum results for your students.
- **We have to adhere to higher standards.** As a courseware provider to other organizations, training firms and/or independent instructors, our content and hands-on lab materials are licensed internationally by dozens of firms, and are therefore subject to very stringent quality requirements. Not only will your organization benefit from our own technical team's technical expertise, but also benefit from the feedback of hundreds of students and trainers using these materials, worldwide, on a regular basis. This unique fact guarantees that our materials are not only robust and interesting, but also technically correct, current and of the highest quality and usability.
- **We bring years of practical, current experience into the classroom and content.** Our instructors and course authors are also skilled mentors, Java, JEE/JavaEE, J2EE, .Net, Agile, SOA, and web services developers, architects and security-oriented professionals. We believe that learning, using and maintaining solid software execution and delivery methods are as important as gaining sharp coding skills. Best Practices for software development and execution, beyond technical coding skills, are enforced throughout all of our courses and discussions. Our team brings this extensive experience into every classroom and engagement. Our team has trained thousands of students.
- **We're skills-centric.** Although our team has extensive experience using a variety of tools and solutions, our core content is "technology-centric". Our aim is to teach you the best skills and solutions out there – not to sell you software from any particular vendor.
- **We're published technical authors, online contributors and industry speakers.** Our team was selected to write the online *J2EE, EJB, EJB CMP-CMR and Web Services Tutorial Series for IBM developerWorks®* (www.ibm.com) These are the same instructors who train our classes and author the courseware. Most of our trainers/consultants have also authored additional articles on web services, EJB, Struts, J2EE / JEE and advanced Java topics, and are recognized speakers and presenters on the industry technical seminar circuit. Our team is comprised on several successful published authors. Members of our team have written or contributed to: *Eclipse Kick Start, Mastering Eclipse; Professional Jakarta Struts; Using Java Tools for Extreme Programming; Mastering Resin; Mastering TomCat and others.*
- **Our services are guaranteed.** Whether you're a stakeholder organizing your firm's educational services, a student in our live or virtual classroom or a trainer using our materials to educate your own client or team – **Our core mission is to make YOU a success in the classroom.**

► For Additional Information

Need dedicated training? All courses can be brought onsite or run virtually for a **private presentation, anywhere around the world**, customized to suit your unique requirements or goals.

Please contact Training@triveratech.com for course details, Public Schedule dates and locations, and Special Discount Offers.

Need courseware? **Let us take the risk out of your classroom delivery!** All materials are also available on a worldwide basis for corporate license with complete instructor support and free corporate branding. Our LoadNGo Set up is available to partners as well! We guarantee our pricing and service. Samples of our course materials, as well as live client references for all of our services are available upon request. Please contact Courseware@triveratech.com for details.

For more information about our training, mentoring or courseware development or licensing options, or to see our complete list of course offerings and services, please visit us at www.triveratech.com, email Training@triveratech.com or call 609.953.1515.
